DEMARTINO, JULIE A.

SICILIANO, SALVATORE J.

SPRINGER, MARTIN J.

TITLE OF INVENTION: EOSINOPHIL EOTAXIN RECEPTOR NUMBER OF ESQUENCES: 4

CORRESPONDENCE ADDRESS:

ADDRESSEB: Merck & Co., Inc.

STREET: P.O. Box 2000, 126 E. Lincoln Ave.

CITY: Rahway

STATE: NJ

COUNTRY: USA

ZIP: 07065-0900

COMPUTER READABLE FORM:

MEDIN TYPE: Diskette

COMPUTER: ISM Compatible

OPERATING SYSTEM: DOS

SOFTWARE: FASLSEQ for Windows Version 2.0

CURSUT APPLICATION NUMBER: US/09/922,895

PILING DATE: 66-Aug-2001

CLASSIFICATION NUMBER: 08/847,296

FILING DATE: 26-APR-1996

ATTORNEY/ACENT INFORMATION:

NAME: Thies J. Eric

REFERENCE/DOCKET NUMBER: 19634V

TELEPHONE: 908-594-3904

TELEPHONE: SEQUENCE CHARACTERISTICS:

LENGTH: 3586 base pairs

TYPE: nucleic acid

STRANDEDNESS: single

TOPOLOGY: linear

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/note="Organ: Bone; Vector: pT773-Pac (Pharmacia) with a modified polylinker; Site 1: EcoR I; Site 2: Not I; NCI_CGAP_DPO is a cDNA library containing the following tissue(s): Subchondral Bone. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT73-Pac vector. The oligonucleotide used to prime the synthesis of
                                                                                                                                                                                                                                                                                                                                 /tissue_type="Subchondral Bone"

dermatitis, isolated human eosinophil eotaxin receptor - used to develop products treating and preventing atopic conditions e.g. allergic rhinitis, matitis, conjunctivitis and bronchial asthma.

14; Page 16-20; Slpp; English.

This cDNA encodes a human eosinophil eotaxin receptor. This 5099 base pair sequence comprises a 1065 base pair open reading frame encoding a 355 amino acid eosinophil eotaxin receptor protein, flanked by a 5' genomic DNA sequence and a 3' terminator region. This novel eosinophil eotaxin receptor is a human beta-chemokine receptor designated CC CKR3. Agents which bind to this eosinophil eotaxin receptor can be used for the treatment and prevention of atopic conditions such as allergic rhinitis, dermatitis, conjunctivitis and bronchial asthma. Agents which block this eosinophil eotaxin receptor can be used to prevent viral infection in healthy individuals and slow or halt viral progression in infected

The specification describes a method for modulating viral infection of a cell. the method comprises modulating a binding interaction between a cell chemokine-receptor and a surface protein of the virus. The proviso is that the cell chemokine-receptor is not CX3CR1 and that the virus is not HIV. The method is useful for treating or preventing respiratory virus infection in vertebrates, more particularly respiratory syncytial virus (RSV) infections, and related diseases, e.g. bronchiolitis, bronchitis, pneumonia or asthma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Modulating viral infection of a cell, for treating or preventing respiratory virus infections, bronchitis, pneumonia or asthma, by modulating a binding interaction between a cell chemokine-receptor surface protein of the virus.

The invention is particularly useful for monitoring a multiple sclerosis patient taking interferon-beta (IFN-beta) or glatiramer acetate (GA) in order to predict treatment response. The present sequence is human CC chemokine receptor 3 (CCR3) gene. This gene is used to illustrate the evaluation of PBMC responses to in Vitro treatment with IFN-beta or GA agents by gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Monitoring multiple sclerosis patient taking beta-interferon or glatiramer acetate to predict treatment response by determining expression profile of inflammatory nucleic acids using RNA of patient comparing to control.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     30-AUG-2004;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   24-MAR-2005

The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, ADBS, epilepsy, neurofibromatosis, rheumatorid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   neuroprotective; anti-HIV; anticonvalsant; ophthalmological; antirheumatic; antiarthritic; antidiabetic; antisportatic; antiinflammatory; cancer; eye disease; arteriosclerosis; anaemia; acute myeloid leukaemia; Alzheimer's disease; AIDS; epilepsy; neurofibromatosis; rheumatoid arthritis; psoriasis; bowel disease; gene;

                                                                                                                                                                                                                                                               This sequence comprises a full-length cDNA coding for novel human chemokine receptor 88-28 (AAW27124), a G protein coupled receptor that is involved in leukocyte trafficking. The 88-2B cDNA was obtained from a macrophage cDNA library using 88-2B-specific primers. A full-length clone (see AAT89161) for chemokine receptor 88C (AAW27123) was also obtained. 88C and 88-2B cDNAs can be used to produce recombinant polypeptides in transformed host cells for use in the treatment of e.g. atheroslerosis, rheumatoid arthritis, tumours, asthma, viral infection, ALDS and inflammatory conditions. Nucleic acid fragments can be used to isolate genomic sequences, to detect alleles of the gene (for diagnosis or in gene therapy), to alter receptor genetics to facilitate identification of modulators and to produce knockout animals, and (antisense forms) to alter/study the genetics and expression of the receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New nucleic acid encoding chemokine receptors 88-2B and 88C - used modulate leukocyte trafficking, e.g. for treatment of inflammation, tumours, viral infections, auto-immune diseases, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 1997-341689/31.
